

Your plan, in every lesson your client takes

Your clients spend most of their week in a classroom. CognitaSTEM carries your recommendations into their ordinary lessons, AI tutors and home practice, and brings their practice results back to you. Learners stay in the same class as everyone else.

Try it with your clients

Sign up free as a teacher, tick Inclusive Instructor on your profile, connect a client, send practice. See every try and best score.

Refer families and schools

The free traits screener for parents, and classroom supports the school switches on for one learner.

Build the next tools with us

Especially for audiology: device checks, listening in noise, audiogram explainers.

CLASSROOM SUPPORTS, SET PER LEARNER

Read aloud, simpler language, visual supports, extra time on timed tests, reading support (larger, spaced text), a sensory-friendly screen and movement breaks. Any connected teacher or the parent switches them on; course lessons, AI tutors and tests change for that learner; teachers get plain classroom guidance; parents are told of each change. No clinical detail is stored with them.

SPEECH AND LANGUAGE

- Speech assessment from one read-aloud passage: counted facts kept apart from interpretation; editable transcript.
- Articulation ladder (R, L, S, T, K, F, G, D) from the sound alone to conversation, moved by readable rules.
- 87 listen-then-say exercises; the microphone opens only after the model is heard.
- Sound pairs: minimal pairs across 10 contrasts.
- Caseload, therapy plans, challenges with tries and scores, AAC board, social stories you review first.

AUDIOLOGY

- Listening game: closed-set word identification in four graded levels (quiet).
- Ling six-sound checklist, said aloud by the adult.
- Practice only, never a hearing test.

OCCUPATIONAL THERAPY

- Fine and gross motor ladders; handwriting analysis.
- Daily-living routines with prompt fading; visual schedules.
- Sensory profiles that suggest classroom adjustments; sensory breaks; a calm space.

FREE TRAITS SCREENER FOR PARENTS

- 15 minutes, ages 5 to 12: four short games and a parent questionnaire.
- Attention scored with the published SNAP-IV; reading and social communication not scored, listed for a teacher or professional.
- Points families to county EARCs and KISE. The parent decides who sees it.

Part of the full platform. CognitaSTEM teaches from any syllabus a school uses: AI tutors and Practice Buddies, a digital board, 3D science labs, STEM and robotics, teacher tools, parent oversight and a Virtual School.

CognitaSTEM does not diagnose. Screening results belong to the parent; a learner's clinical profile is visible only to the practitioner who keeps it.
